Q. Given an Array. Q queries

Each query

1.  $i, val \Rightarrow a[i] = val$

2.  $l, r \Rightarrow$  Find minimum in the range  $[l, r]$

array C =  $\begin{matrix} 0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 \\ 10, & 2, & 7, & -3, & 5, & 8, & 1, & 15 \end{matrix}$

$$Q = 4$$

1.  $\Pi$   $L=1, R=4 \Rightarrow -3$

2. II  $L=4, R=6 \Rightarrow 1$

3. I  $j=2, val = -7$

4. II  $I=0, R=5 \Rightarrow -7$

BF,

1. make  $a[i] = val$

$Tc: O(1)$

2. L, R

iterate & find minimum.  $Tc: O(N)$

$Tc: O(Q \cdot N)$

$N \rightarrow$  no. of elements  
in array

$Q \rightarrow$  queries.

## Segment Tree

1. Complete Binary Tree

arr =  $[10, 2, 7, -3, 5, 8, 1, 15]$

$$S = 2^0 + 2^1 + 2^2 + \dots + 2^{\log N}$$

$$= 2^N$$

1. Build a tree
2. Update
3. Answer of query.

arr = [10, 2, ~~1~~, -3, 5, 8, 1, 15]

-7

i = 2, val = -7

T.C:  $O(\log N)$

arr = [10, 2, 7, -3, 5, 8, 1, 15]

$l=1, r=4$

ans = -3

$T.C: O(\log n)$

related to the range

1. Build a tree
2. Update
3. Answer of query.

$arr[N]$

$seg[4N] =$

$build(\overset{\downarrow}{0}, 0, N-1);$

```
void build ( int  indx, int l, int r )
{
    if ( l == r )
    {
        seg[indx] = a[l]
        return
    }
    m =  $\frac{l+r}{2}$ 
    build ( 2*indx+1, l, m ) ✓
    build ( 2*indx+2, m+1, r ) ✓
    seg[indx] = min ( seg[2*indx+1], seg[2*indx+2] )
}
```

$build(0, 0, N-1)$

$Tc: \theta(N)$

`build(0, 0, n-1);`

void `update ( ind, l, r, i, val )`

ind → index of Segtree  
 l → range this node is representing  
 r → index of array needs to be updated  
 i → new value of array

`if ( l == r )`

`{ a[i] = val`  
`seg[ind] = val`  
`return`

← not mandatory.

`m =  $\frac{l+r}{2}$`

`if ( i ≤ m ) update ( 2*ind+1, l, m, i, val )`

`else update ( 2*ind+2, m+1, r, i, val )`

`seg[ind] = min ( seg[2*ind+1], seg[2*ind+2] )`

`TC: O(logN)`
