Q1. Nearest smaller element :- by position

For every index i , find the nearest smaller element on left-side in comparison to $arr[i]$.

	0	1	2	3	4	5
arr $\Rightarrow$	4	5	2	10	3	2
ans $\rightarrow$	X	4	X	2	2	X
	-1		-1			-1

	0	1	2	3	4	5	6	7
	4	6	10	11	7	8	3	5
ans $\rightarrow$	X	4	6	10	6	7	X	3
	-1						-1	

Basic :-

```

for (i = 0  $\rightarrow$  N) {
    ans[i] = -1
    for (j = i-1  $\rightarrow$  0) {
        if (arr[j] < arr[i]) {
            ans[i] = arr[j]
            break
        }
    }
}

```

TC $\Rightarrow O(N^2)$

SC $\Rightarrow O(1)$

ans[i], st[i]
for (i = 0 → N) {
    while (!st.empty() && st.top() >= arr[i]) {
        st.pop();
    }
    if (st.empty()) {
        ans[i] = -1;
    } else {
        ans[i] = st.top();
    }
    st.push(arr[i])
}

```

change to $\leq$ for Q3

TC $\Rightarrow O(N)$
 SC $\Rightarrow O(N)$

Q2. Nearest smaller element on right side?

iterate from $N-1 \rightarrow 0$

Q 3. Nearest greater element — on left side

4	6	10	11	7	6	3	5
↓	↓	↓	↓	↓	↓	↓	↓
x	x	x	x	11	7	6	6

5
~~9~~
~~6~~
~~7~~
~~8~~
~~9~~
~~7~~

only change → while loop (≤ 2)

Q 4. Nearest greater element — on right side.

→ Start from end in Q3

Q 5. Find the largest rectangle formed by continuous histogram

↓ ↓ ↓ ↓
20 3 18 12

$O/p \Rightarrow \underline{\underline{20}}$

B.F $\Rightarrow$ consider all possible subarrays

↓
 $f.c \Rightarrow O(N^3) \rightarrow \text{Optimised} \rightarrow \underline{\underline{O(N^2)}}$

$$\left. \begin{aligned} \text{Area} &= \text{height} \times \text{width} \\ &= n \times (r - l - 1) \end{aligned} \right\} \begin{aligned} &(r-1) - (l+1) + 1 \\ &= r-1 - l-1 + 1 \\ &= \underline{\underline{r-l-1}} \end{aligned}$$

Calculate

$ls[i] \leftarrow$ nearest smaller on left side (index)

$rs[i] \leftarrow$ nearest smaller (index) on right side

for $(i=0 \rightarrow N) \{$

$$ans = \max(ans, arr[i] \times rs[i] - ls[i] - 1)$$

}

$$\begin{array}{lcl} TC \Rightarrow O(N) & \xrightarrow{\quad} & 3N \rightarrow \begin{array}{l} ls \\ rs \\ ans \end{array} \\ SC \Rightarrow O(N) & & \end{array}$$

$$\xrightarrow{\quad} 2N \rightarrow \begin{array}{l} ls \\ rs \end{array}$$

Q 6. Find the sum of (max-min) for all subarrays.

subarrays

arr = 0 1 2
 2 5 3

	max	min	max-min
0-0	2	2	0
0-1	5	2	3
0-2	5	2	3
1-1	5	5	0
1-2	5	3	2
2-2	3	3	0
			8 $\rightarrow$ <u>012</u>

BF $\Rightarrow$ consider all subarrays $\rightarrow TC \ O(N^2)$

$$\sum_{S_1} (Max_1 - Min_1) + \sum_{S_2} (Max_2 - Min_2) + \sum_{S_3} (Max_3 - Min_3) + \sum_{S_4} (Max_4 - Min_4)$$

$$= \left(\sum_{\text{of all subarrays}} Max - \sum_{\text{of all subarrays}} Min \right)$$

↓
i is max in n

subarrays → contribution of i → cnt[i] × n

subarrays where i is present ⇒ $(i-1) \times (N-i)$

Contribution technique → [find out in how many subarrays i is max and i is min]

$$\underline{\underline{\text{max}}} \text{ } \underline{\underline{\text{arr}[i]}} \times \left[\left(i - \underset{\downarrow}{(l+1) + 1} \right) \times \left(r - \underset{\downarrow}{L - i + 1} \right) \right]$$

$$\underline{\underline{\text{min}}} \text{ } \underline{\underline{\text{arr}[i]}} \times \left[\left(i - \underset{\downarrow}{(l+1) + 1} \right) \times \left(r - \underset{\downarrow}{L - i + 1} \right) \right]$$

rs $\rightarrow$ smaller element on right side

ls $\rightarrow$ smaller element on left side

rg $\rightarrow$ greater element on right side

lg $\rightarrow$ greater element on left side

H.W $\rightarrow$ code
