Delete the min from a given min heap (Array)

```
int deleteMin(A) {
    ans = A[0];
    swap(A[0], A[last]);
    last--;
```

```
    i = 0;
```

```
    while (i < last) {
```

```
        int minIdx = i;
```

```
        int l = 2i + 1, r = 2i + 2;
```

```
        if (l <= last && A[l] < A[minIdx]) {
```

```
            minIdx = l;
```

```
        }
```

```
        if (r <= last && A[r] < A[minIdx]) {
```

```
            minIdx = r;
```

```
        }
```

```
        if (minIdx == i) {
```

```
            break;
```

```
        }
```

```
        swap(A[i], A[minIdx]);
```

```
        i = minIdx;
```

```
    }
```

```
    return ans;
```

```
}
```

1, 5, 3, 8, 9, 7, 6

TC:  $O(N)$

Priority Queue  $\longrightarrow$  Heap  
(MinHeap)  $\quad$   $\text{add}(\text{insert})$ ,  $\text{poll}(\text{deleteMin})$ ,  $\text{peek}(\text{getMin})$

PriorityQueue <Int> heap = new PriorityQueue <Int> (),

Q Given an array. Find the  $K$  smallest elements.

7, 9, 2, 1, 10, 3, 5, 8, 12, 50

$K=5$  7, 2, 1, 3, 5

Approach 1

- Sort the array
- Return first  $K$  elements.

TC:  $O(N \log N)$

Approach 2

- Array  $\longrightarrow$  Min heap
- $\text{deleteMin}()$   $\longrightarrow K$  times

$O(N)$

$O(K \log N)$

TC:  $O(N) + O(K \log N)$

SC:  $O(N)$

7, 9, 2, 1, 10, 3, 5, 8, 12, 50  
 $K=5$  7, 2, 1, 3, 5

7 2 1 3 5

9, 10, 8, 12, 50

7, 9, 2, 1, 10, 3, 5, 8, 12, 50 ↓

7 9 2 1 10 → 10 > 3  
 7 9 2 1 3 → 9 > 5  
 7 5 2 1 3 → 7 < 8

Max heap of size  $K$

- Build a max heap with first  $K$  elements.  $O(K)$
  - For every  $i$  in  $[K+1 \text{ to } N-1]$ 
    - if  $(A[i] < \text{heap.getMax}())$  {
      - deleteMax()
      - insert( $A[i]$ );
- $\left. \begin{matrix} N-K \\ O(\log K) \end{matrix} \right\} (N-K) \log K$

TC:  $O(K) + O((N-K) \log K)$

SC:  $O(K)$

## Running Median

Getting a stream of integers.  
With every new element return the current median.

|   |   |     |     |       |     |
|---|---|-----|-----|-------|-----|
| 4 |   | 4   |     | → 4   |     |
| 4 | 6 | 4 6 |     | → 5   |     |
| 4 | 6 | 3   | 4 6 | → 4   |     |
| 4 | 6 | 3   | 2   | → 3.5 |     |
| 4 | 6 | 3   | 2   | 9     | → 4 |

### Approach 1

Maintain data in sorted order  
(Insertion Sort)

TC/insertion →  $O(N^2)$

↓ optimize

$$\frac{EM}{IC}$$
